Course Overview

This course is designed to equip participants with the skills to leverage data strategically and transform it into actionable insights. It begins with an introduction to data analytics and project phases, then explores advanced Excel functionalities, including sorting and filtering, lookup functions, conditional formatting, PivotTables, and more. The final stage covers data visualization, teaching participants how to represent data effectively through charts and tables. The course also bridges the strengths of SQL for data management with Excel's analytical capabilities, using real-world examples to turn raw data into meaningful insights.

Course Objectives

By the end of this course, participants will be able to:

Understand the principles and best practices of data analytics and its business value.

Apply Excel effectively for data analysis and processing.

Import and clean data to ensure data quality before analysis.

Analyze data using filters, sorting, lookup functions, and PivotTables.

Retrieve and manipulate data efficiently using SQL.

Perform advanced data analysis and create visualizations in Excel.

Integrate SQL and Excel to enhance analytical efficiency.

Present data-driven findings to support strategic decision-making.

Target Audience

This course is suitable for a wide range of professionals, including:

Data analysts and business intelligence professionals

Managers and team leaders seeking data-driven decision-making

Professionals in finance, marketing, operations, or any data-intensive field

Anyone aiming to enhance their data analytics skills with Excel and SQL

Methodology

HighPoint Training and Management Consultancy هاي بوينت للتدريب والاستشارات الإدارية info@highpointtc.com www.Highpointtc.com

The course uses interactive adult learning techniques to ensure comprehension, retention, and practical application, including:

Interactive lectures

Group discussions and collaborative exercises

Real-world case studies

Hands-on exercises with Excel and SQL for practical learning

Course Outline

Day One: Introduction to Data Analytics

Introduction to data analytics and its role in business success

Overview of Excel and SQL in the analytics workflow

Data types, structures, and database management basics

Setting up and accessing data in SQL databases and Excel

Day Two: Retrieving Data with SQL

SELECT statements and column aliases

Filtering data with WHERE clauses

Sorting data with ORDER BY

Limiting results with LIMIT and OFFSET

Advanced querying techniques: handling NULL values, pattern matching with LIKE and wildcards, grouping

data with GROUP BY, filtering grouped data using HAVING

Day Three: Advanced Data Analysis in Excel

Importing and cleaning data in Excel

Using formulas and functions for data transformation

Creating PivotTables and PivotCharts for dynamic reporting

Statistical analysis: descriptive statistics, regression, and correlation

Hands-on exercises with real-world datasets

Day Four: Data Aggregation and Advanced Analysis

Window functions and ranking

Using aggregate functions with GROUP BY

Analytic functions for advanced insights

Database security concepts

Granting and revoking permissions

Protecting sensitive data

Day Five: Data Visualization and Reporting Principles of effective data visualization

Creating compelling dashboards and reports in Excel
